

"I refer to the mapping program on average once a week. It saves us a ton of time and money by not having to have the power or phone company bring out a tracer and find the lines. With the program, we can print out where lines already are. The local phone company was putting in new fiber optic cables. When we handed them a printout of the mapped area, they said this is going to save us so much time.

When you're dealing with feedlots that are 30, 40 or 50 years old, the feedlot and the technology needs to be updated. We're looking at changing from a two chute load out for fats to a three chute. By looking at the blueprints, we can see what we need to do before we call dig safe. We can plan ahead, looking at water lines and electric lines and what changes need to be made."

# MAPPING SOFTWARE AND SERVICE

*What is it, and why  
do we need it?*

**Are you having trouble locating your utility lines?**

**Do you have notes everywhere on where your lines are located for different sections?**

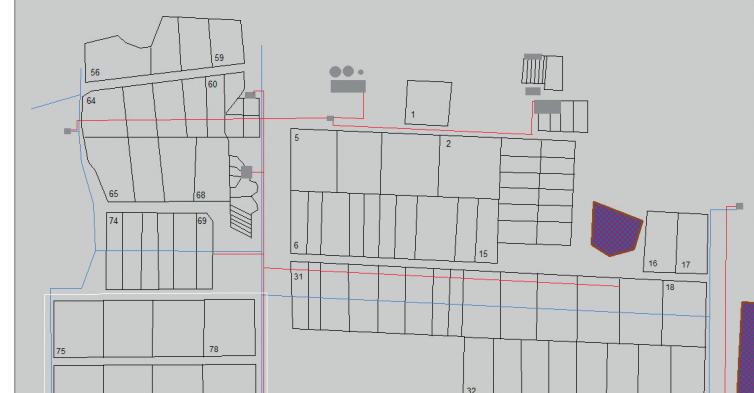

Neetersoft mapping software can help by mapping your feedlot, saving you time and money. The safety and convenience of knowing exactly where all of your utility lines are is invaluable.

Neetersoft Blueprints is a unique and custom developed software package specifically for recording the location of all utility lines, allowing for easy and convenient location information.

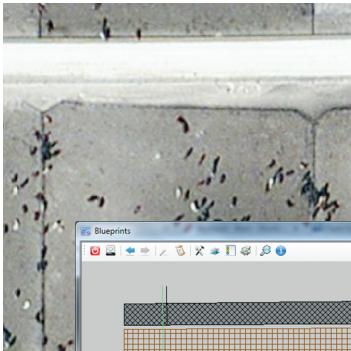

**Neetersoft Blueprints will save you both time and money.**

- No need to wait for a locator to come out, you know exactly where the lines are.
- A click of your mouse shows you length and depth of each line.
- You can map it yourself – we have the training.
- We can map it for you – gather all those pieces of paper – and we'll take it from there.
- Software is easy to use.
- Online training available after initial set up.
- One on one training is also available.

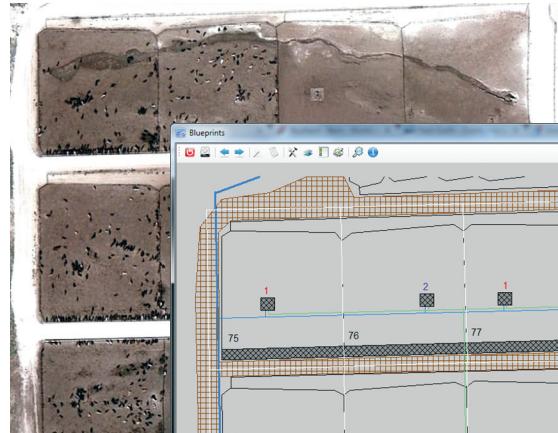

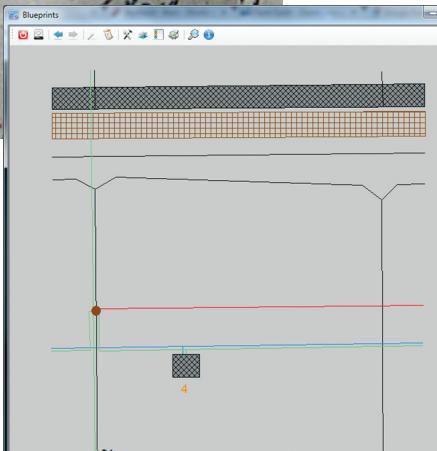

Starting with a satellite overview using Google® a comprehensive map is then produced showing pens and utility lines.

This level shows main water and electric lines.

The numbers beside the water tank tell you which breaker will shut that tank off. Clicking on that number will show you the layout of the breaker box.

This level shows more detail, smaller water lines and the 110 electric running from tank to tank.
